Step 4: Power on your router
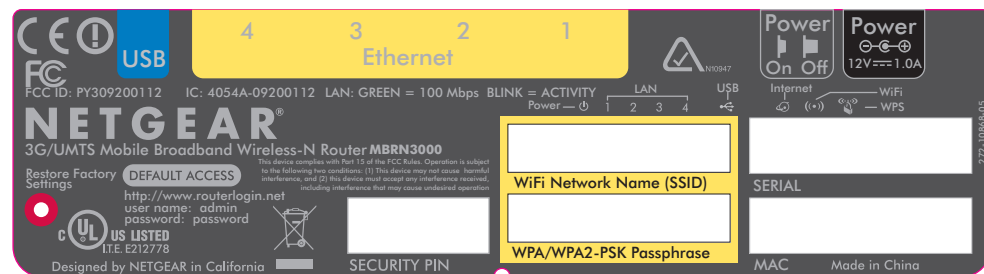

Wait until the Power LED turns solid green. Then open a browser.

Note: If the web page does not display, close and reopen the browser. Enter **http://routerlogin.net** in the address bar. Otherwise, check the *Troubleshooting* section on the back of this installation guide.

Preset Wireless Security

This product has a unique WiFi network name (SSID) and network key (passphrase). The default SSID and network key (passphrase) are uniquely generated for every device (like a serial number) to protect and maximize your wireless security. This information is located on the label on the bottom of the product.

NETGEAR recommends that you do not change the preset WiFi network name (SSID) and network key (passphrase). If you do change the settings, the information on the bottom of the product does not apply.

Find the preset wireless settings on your router and record them here:

WiFi network name (SSID) _____

Network key (passphrase) _____

If you change the preset wireless settings, record them here:

Wireless network name (SSID) _____

Network key (passphrase) _____

If necessary to retrieve or update your passphrase, type **http://www.routerlogin.net** in a web browser and log in using the default user name (**admin**) and password (**password**). Select **Wireless Settings** to locate your wireless passphrase.

FAQs

• What kind of broadband USB modems work with the Mobile Broadband Wireless-N Router?

  The Mobile Broadband Wireless-N Router is compatible with a variety of 3G+ and UMTS mobile broadband USB modems. For a list, see the NETGEAR website at *http://www.netgear.com/3G*.

• For a strong Internet connection, where should I locate my mobile broadband USB modem when I connect it to the router?

  For Internet coverage, check with your ISP to find out what its service areas are. When positioning the mobile broadband USB modem, place it near a window.

• How do I join the router's wireless network?

  - On your wireless computer or device (iPhone, gaming device), open the software that manages your wireless connection.
  - Look for your wireless network—the one you named when you set up your router. Select it, and connect.
  - If you set up wireless security, enter your passphrase or network key.
  - For a WPS (Wi-Fi Protected Setup) connection—NETGEAR calls this Push 'N' Connect—press the **WPS** button on the router. It looks like [icon].

  Within 2 minutes, follow the software instructions on your wireless device to complete the WPS process.

Troubleshooting

What should I do if the router does not connect to the Internet?

• Connect your modem directly to your computer and test your Internet connection at the same location as the router.

• On your computer, stop the software that your modem uses to connect to the Internet if it is running.

• If you can access the Internet only when the modem is connected directly to your computer:

  - Make sure that your modem is compatible with the Mobile Broadband Wireless-N Router. See the list at *http://www.netgear.com/3G*.
  - Log in to the router menu and check your router's Internet configuration. Check that the user name, password, and APN with ISP are set correctly. If you use a PIN to connect to the Internet, make sure it is entered correctly.

- If you are using a wireless computer to connect to the router, check your wireless connection. For help with troubleshooting wireless connections, log in to the router and click the link to the online *User Manual*.

Technical Support

Thank you for selecting NETGEAR products.

After installing your device, locate the serial number on the label of your product and use it to register your product at *http://www.NETGEAR.com/register*. Registration is required before you can use the telephone support service. Registration through the NETGEAR website is strongly recommended.

Go to *http://support.netgear.com* for product updates, documentation, and support.

For additional information about setting up, configuring, and using your Mobile Broadband Wireless-N Router, see the *User Manual*.
